FRONTIERS TIERING

Following article publication, the **impact metric data** is collected, evaluated and used as a basis for our Chief Editors to invite **authors of high impact articles to write a "Focused Review"**. This article type puts the original discovery into a wider context, **for a broader audience and a deeper impact**.

Frontiers is so far the only publisher to design a system that semi-automatically **distills the most outstanding research** in this crowdsourced way on the basis of impact metrics, **evaluated democratically** for its academic excellence and social relevance.

While climbing up from Original Research to Focused Review, the research addresses a broader public and becomes more socially relevant.

FOCUSED REVIEWS are democratically voted high impact articles

Best articles are suggested by our **IMPACT ANALYTICS** and selected by our **CHIEF EDITORS**

EXPERTS read and download the articles

ORIGINAL RESEARCH ARTICLES are published in the Frontiers journals
